EDUCATION

Manipal Institute of Technology, Bengaluru

Bengaluru, India

Bachelor of Technology in Computer Science (Data Science); CGPA: 8.4/10

Expected May 2028

- Relevant Coursework: Data Structures & Algorithms, Probability & Statistics, Object-Oriented Programming, Discrete Mathematics

EXPERIENCE

Mastek Ltd.

Mumbai, India

Intern

Jun 2025 - Aug 2025, Jun 2026 - Jul 2026

- Worked on production-grade evaluation pipeline for an AI incident-resolution system, benchmarking embedding strategies and Azure AI Search hybrid retrieval to improve similar-incident matching quality on real support data
- Developed multi-node LLM agents using LangChain and LangGraph, including a production blog-writing agent orchestrating a 3-node pipeline (research → draft → edit)
- Conducted an end-to-end security assessment of a production web application against NIST CSF and ISO 27001 frameworks, designing standardized audit checklists later adopted across multiple engagements

IEEE Computational Intelligence Society, MIT Bengaluru

Bengaluru, India

Chair

Sep 2025 - Present

- Lead a 15+ member student technical chapter, setting strategy and overseeing execution of workshops and technical sessions on AI and cybersecurity for 200+ attendees
- Own budget planning, cross-team coordination, and stakeholder communication for chapter initiatives

PROJECTS [CLICK TITLES FOR LIVE DEMO]

Multi-Market Swing Trading Screener | *Python, FastAPI, AWS, Quantitative Modeling*

- Built an automated multi-factor quantitative screening engine for cross-market equity analysis, combining volatility-adjusted pricing, momentum indicators, and a probabilistic scoring matrix to surface mean-reversion and trend-continuation setups
- Designed a dynamic, ATR-anchored risk model (volatility-based stop-loss and multi-tiered profit targets) in place of static risk percentages, enforcing a minimum risk-to-reward threshold before validating any candidate
- Deployed a modular FastAPI web dashboard and CLI on AWS, decoupling data ingestion, quantitative analysis, and presentation layers for configurable, real-time screening

Indian IPO Analyzer – Multi-Agent Financial Pipeline | *Python, LangGraph, Gemini, Web Scraping*

- Built a production multi-agent system using LangGraph orchestrating 5 specialist agents (fundamentals, valuation, sentiment, risk profiling, synthesizer) that ingests live IPO data, computes financial ratios (P/E, P/B, ROE, ROCE, debt/equity, CAGR), and generates personalized suitability reports
- Designed deterministic financial calculations (unit-tested, no LLM hallucination risk) paired with LLM-based explanations, ensuring every number in the report is independently verifiable and traceable to source data

NBA Contract Analyzer – End-to-End Data Pipeline & Dashboard | *Python, Pandas, Ridge Regression, Web Scraping*

- Built a data pipeline modeling real 2023 CBA mechanics (rookie scale, max tiers, supermax, Bird rights, luxury-tax apron) to value NBA contracts against on-court performance rather than raw salary
- Engineered a regression-based market-value model on player-season statistics, quantifying surplus/deficit value as a % of salary cap across 101 players and 30 teams
- Designed an interactive dashboard surfacing team payroll, apron status, and contract grading, with documented data-quality caveats reflecting rigorous, transparent analysis

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C++

Quantitative/ML: Scikit-learn, Pandas, NumPy, XGBoost, Regression Modeling, Statistical Analysis

Frameworks & Tools: React.js, Node.js, FastAPI, AWS, Git

Risk & Compliance: NIST CSF, ISO 27001, Threat Modeling, Security Audits

Interests: Financial Markets, Sports Analytics, Applied AI
